

# These five tools are essential for real gardening...

## Long-Handled Spade

Unlike shovels, spades have straight blades set at an angle and are used for cutting and digging into soil.

## Spading Fork

With their square, flat tines, these heavy-duty forks are invaluable for preparing and moving soil.

## Steel Rake

Break up clay and soil clods, rake in fertilizer and smooth out soil with these tools.

## Hoe

Hoes come in all shapes and sizes. They are used to form rows, make seed holes, cover seeds, till soil and cut/remove weeds.

## Hand Trowel

Trowels are efficient for marking rows, weeding, making furrows, potting and moving smaller plants.
